*Promoting Power compares the number of seniors enrolled in a high school to the number of freshmen four years earlier (or three years earlier in a 10-12 high school). According to CSOS, it is currently the best available estimate of school-level graduation rates that can be used to compare high schools within and across states.

Promoting Power compares the number of seniors (12th-graders) in a high school to the number of freshmen (9th-graders) three years earlier. In a high school with Grades 10-12, it compares 10th-graders to 12th-graders two years later. These enrollment numbers are taken from the U.S. Department of Education's Common Core of Data and reported by school districts every fall. Promoting Power essentially tells us the extent to which students in a high school succeed in making it from 9th to 12th grade.
